Tree houses are constructed primarily as self-supporting structures; this means that no foundations are needed, and there is no danger of damage to the roots or the trunk. This double tree house was erected in the Schweinfurt game park. It has an overall height of about 8 meters and covers an area of 10 x 8 meters.

There are two possibilities for climbing to platforms at a height of 1.5 to 6 meters. Above these, the openings in the walls are protected by stainless steel latticework. A net bridge connects the two treehouses. And the mascots of the game park, elk and mountain goat figures, watch from the highest roof over the visitors, big and small.
